RECRUIT OUR STUDENTS
AND GRADUATES**

These JEM Technical employees are all graduates or students of HTC who have studied Fluid Power Engineering.

Leadership in manufacturing

As the president and owner of an engineering and manufacturing company, Andrea Tysdal hires an impressive number of graduates from HTC. In 2020, there are more than two dozen alumni working at Tysdal's company, JEM Technical Marketing Company, Inc.

Tysdal is confident in hiring HTC graduates because she's a graduate too. In 2003, she earned an associate degree in Fluid Power Engineering.

Because of her commitment to giving back to her community, Tysdal maintains an important connection to the college by serving on the Advisory Board for the Fluid Power program at HTC.

More than 40 Advisory Boards give feedback on the curriculum by using their industry knowledge in effort to prepare the students for future careers. "It's extremely valuable when people in industry and the business community are able to develop those components together," says Tysdal.
